SUMMARY

Product designer who turns complex data into clear decisions for B2B SaaS and AI-powered products. Raised task completion by 27% with an information architecture redesign at Innovatum, designed and shipped RetailPilot, a live AI decision product, and now owns features end to end for client products on contract. Works from research and stakeholder problem statements to high-fidelity prototypes and dev-ready handoff, and builds working prototypes with AI tools such as Figma Make, Claude Code, Cursor and Lovable.

EXPERIENCE

Product & UX Designer | Contract, with a small design team — Jul 2025 – Present

- Own features end to end across three client engagements: gather requirements from founders, derive problem statements, and take work from wireframes to high-fidelity prototypes and dev-ready Figma handoff.

UX Designer | Innovatum — Aug 2024 – Jan 2025

- Diagnosed user drop-off as a wayfinding problem rather than a content gap, then restructured information architecture and navigation around task priority; task completion rose 27%.

Graphic Designer | Freelance (Fiverr) — Jan 2023 – Jun 2024

- Designed brand identities, landing pages and digital assets for small businesses, building visual craft in typography, layout and colour.

SELECTED PROJECTS

One shipped product (my IIT Hyderabad capstone) and three concepts. Full case studies at jeshmiportfolio.vercel.app

RetailPilot | AI decision product for Indian retail, designed, built and live (IIT Hyderabad capstone)

- Designed a decision inbox ranked by rupees at stake, with confidence, evidence and a person approving every order; in walkthroughs with store managers, reorder decisions took 3 minutes instead of 30, with ~40% less dead-capital risk. Built and shipped it (Next.js, FastAPI, PostgreSQL): retailpilot-tau.vercel.app.

Trip Confidence | Predictive trip check for Ola Electric riders

- Turned a distrusted battery percentage into one trip verdict (Comfortable, Tight, Not enough) and a single recommended fix, built from four rider personas.

Pulse | Developer tool for iOS performance (MetricKit)

- Reframed a metrics dashboard into an investigation workspace built around the regression, with honest confidence levels, owners and status so findings outlast a single session.

Toing | Group ordering with auto-split payments

- Designed the flow from join link to locked order: shared diet and budget preferences, a real-time group cart with allergy flags, and one-tap checkout that splits the bill by UPI or card; built a working checkout prototype.

SKILLS

Product & UX: Problem framing, end-to-end flows, information architecture, interaction design, wireframes, high-fidelity prototypes, B2B dashboards, payment and checkout flows

Research: User interviews, shadowing, competitive audits, personas, usability walkthroughs, A/B test planning

Visual: Visual design, typography, colour, design systems, motion specs

AI & prototyping: Figma Make, Figma AI, Claude, Claude Code, ChatGPT, Cursor, Lovable, Antigravity, Stitch

Tools: Figma, FigJam, Framer, Adobe Creative Suite, HTML, CSS

EDUCATION

PG Diploma, Visual Design & UX | IIT Hyderabad — Jul 2025 – Jul 2026

BCA, Computer Applications (UX Design) — Jun 2022 – Dec 2024
